

CASE STUDY

UHOne + Horizon Commerce

Connecting the shopping journey to unlock funnel conversion

\$16.77M

in projected annualized incremental value across winning tests

PROGRAM AT A GLANCE

9

major wins shipped to production

+11.4%

lift in Cart Additions (top winner)

7–35%

prior-year lifts from product-intent capture (validation)

A connected journey that turned traffic into buyers

UHOne was attracting strong traffic to Home and Product pages, but Census form completion and post-Census product fit were leaving material revenue on the table. Horizon Commerce launched a structured CRO program focused on capturing product intent early and carrying it downstream — producing three shipped winners and \$16.77M in projected annualized value.

\$16.77M

Projected annualized value shipped

+11.4%

Cart Additions per Visitor lift on top winner (alpha .04)

\$5.95M

Value from #1 winner: Global Product Intent Capture Via Sticky Nav

\$2.63M

Value from #2 winner: Home Hero CTA + Grid

Intent capture worked

Capturing product intent and ZIP at the top of the page lifted Quote Start and Cart Additions without hurting downstream funnel health.

Enhanced, not retired

We iterated the top winner into a simpler variant to reduce friction while preserving lift — a signal that the intent concept, not a specific design, is the value driver.

Upper funnel still matters

Trust-building modules (e.g. Why United?) on Product pages drove return visits and compounded conversion over time.

UHOne was winning at traffic — and losing at fit

The situation

- **Traffic was landing on Home and Product pages**

Visitors were funneled into an ecom flow gated by a Census form — which ensures users only see plans available in their state/ZIP.

- **Census was doing its job, but not its best job**

Users frequently arrived, completed Census, then dropped off at the product display step because the assortment didn't match what they came looking for.

- **The journey was disconnected**

Nothing about a visitor's stated interest carried from the top of the page into the funnel, so the post-Census experience felt generic instead of personal.

THE HORIZON COMMERCE GOAL

Improve three KPIs, in order:

01

Quote Start Rate

Rate at which visitors enter the Census funnel

02

Quote Submit Rate

Rate at which users complete the Census form

03

Cart Additions / Purchase

Rate at which users add plans and buy

Three signals pointed to the same opportunity

We didn't start with a guess — we started with converging evidence.

01

SITE ANALYTICS

Analytics: the biggest drop-off

The step right after Census completion — when users were first shown products — was the single highest drop-off point in the UHOne purchase journey.

02

VOC RESEARCH

VoC: customers couldn't find fit

Voice-of-Customer data surfaced a consistent complaint: shoppers couldn't see or find the product they came to UHOne to shop for.

03

HISTORIC TESTING

Testing history: intent = lift

Prior-year tests that captured product intent and used it downstream showed lifts of 7% to 35% — a wide range, but the direction was unambiguous.

Our thesis: capture product intent early, and the entire funnel downstream works harder.

A disciplined, evidence-led testing engine

Result: a repeatable cadence — not a one-time burst — that turns research into shipped code.

Two parallel bets to reshape the journey

Audit insights translated into two complementary strategic bets:

01 Create a connected shopping experience

Capture product intent at the top of the page so we can use it to personalize content and product displays downstream.

Tactics

- Add a sticky nav module that captures product type + ZIP before Census
- Surface ZIP availability early so users know whether their product of interest is available before they complete Census
- Pass intent into the post-Census product display to match assortment to stated need
- Iterate the module shape/copy to reduce friction while preserving lift

02 Match content to user intent by page

Address high-intent returners on Home and new visitors landing on Product pages with strategically upper- and top-of-funnel content.

Tactics

- Home Hero CTA + Product Grid to give returning high-intent users a fast path into the right product
- "Why United?" trust module on Product pages for new visitors who need a reason to come back
- Dermatology section to expand MHCP product relevance
- Census-page intent capture variants to de-risk the #1 bet across placements

\$16.77M in projected annualized value across the program

TOTAL PROGRAM VALUE

\$16,767,416

Projected annualized incremental value across shipped winners.

#1

Pre-shop Global Sticky Nav Product Intent Capture

\$5.95M

#1b

Simplified Sticky Nav (enhanced variant)

\$2.79M

#2

Home Hero CTA Element + Product Grid

\$2.63M

VALUE BY TEST (annualized)

Test	In-Test Value	2025 Value	2026 Value	Value
Census - Desktop Male Hero Image	\$50.52	\$1,822,969.35	\$1,761,832.22	\$3,584,852.09
Home Hero CTA Element + Product Grid	\$131,540.04	\$1,549,694.15	\$945,114.00	\$2,626,348.19
Product Pages New module	\$26,110.35	\$251,601.72	\$408,535.01	\$686,247.08
Census Product Hero Image	\$6,384.43	\$95,333.26	\$146,383.24	\$248,100.94
Pre-shop Global Sticky Nav Product Intent Capture Feature	\$134,693.60	\$1,898,947.48	\$3,918,152.67	\$5,951,793.76

	\$449,925.94	\$6,037,111.73	\$10,280,378.90	\$16,767,416.56

Ranked by total projected value. Winners shipped to production highlighted.

A new front door to the Census funnel

(A) Control – No Product Intent Capture

Winner -- Recommended

(B) Sticky Nav CTA Product Intent + ZIP Capture

OBJECTIVE & HYPOTHESIS

Objective. Lift Quote Start Rate and downstream conversion by capturing product intent and ZIP at the top of the page.

Hypothesis. A persistent, low-friction sticky nav that asks "what are you shopping for?" + ZIP will set correct expectations and route users to relevant product displays — increasing Quote Starts and Cart Additions without hurting Census completion.

+11.4% Cart Additions per Visitor lift
1.05% vs 1.17% control

STATUS

- Shipped to 100% of traffic
- Enhanced into a simplified variant (next)

Lift at the top of the funnel — and deeper into it

DESKTOP RESULTS • VARIANT B (TEST) vs A (CONTROL)
vs C (INTENT ONLY)

Desktop

Version	Visitors	Quote Start Rate	Quote Submit Rate	Cart Additions per Visitor	Bounce Rate
A (No Product Intent Capture)	47,594	5,032 (10.57%)	2,074 (4.36%)	502 (1.05%)	1.28%
B (Sticky Nav CTA Product Intent + ZIP Capture)	46,309	*5,303 (11.45%)	2,058 (4.44%)	*544 (1.17%) alpha .04	1.23%
C (Sticky Nav CTA Product Intent Capture)	46,180	4,850 (10.50%)	2,008 (4.35%)	*593 (1.28%)	1.11%

What the numbers say

Variant B (Intent + ZIP) wins on Quote Start Rate (11.45% vs 10.57%) and Cart Additions (1.17% vs 1.05%).

Variant C (Intent only, no ZIP) also lifts Cart Additions — showing product intent alone is valuable, but ZIP adds real lift on Quote Starts. Bounce Rate held or improved across both variants — zero guardrail damage.

POST-CENSUS PRODUCT MIX • INTENT CAPTURE
SHIFTS USERS TOWARD RELEVANT PRODUCTS

WHY THIS MATTERS

4.4% drop in broad Census visits on Variant B

(56.97% → 54.46%, statistically significant).

Users aren't disappearing — they're being routed into the **right** Census path (dental, vision, short-term, etc.) the first time.

That's the whole thesis in one chart.

Census Pages by VAR – Filtered For Desktop Visits Hitting Census

Results Summary

- Var B and C saw 4.4% and 2.6% decreases in users visiting broad Census respectively.
 - The 4.4% decrease from 56.97% to 54.46% on Var B was statistically significant

We iterated the winner — kept the lift, cut the friction

Winner

(B) Test - Sticky Nav Product Intent Capture Single CTA

THE ENHANCEMENT

What changed. Consolidated the original two-CTA module into a single clear CTA with product-type selection and ZIP — fewer decisions, less visual weight, same intent capture.

Why we tested it. Winner #1 proved the concept. Next question: how much of the design was load-bearing? A simpler variant answers that.

\$2.79M

Projected annualized value from the simplified variant

Lower

Visual and interaction friction vs original Winner #1

Durable

Concept works across design implementations — intent is the driver

Meta-learning: Don't just roll out the first winner — retest its components. You'll either confirm the design is load-bearing, or (as here) find a simpler version that ships better.

A fast lane for high-intent returning users

OBJECTIVE & HYPOTHESIS

Audience. Returning visitors hitting Home — often high-intent and further along the consideration curve than Product-page entrants.

Objective. Give this audience a direct path to the product they're considering, without making them hunt through marketing content.

Hypothesis. Replacing the generic hero with a prominent CTA + a product grid of the full UHOne portfolio will raise Quote Starts for returning users and reduce bounce for new users who need a product-level orientation.

Why on Home. Audit showed Home getting a disproportionate share of returning traffic — a higher-intent audience deserved a higher-intent front door.

RESULTS

\$2.63M

projected annualized incremental value

Who it helped

Returning high-intent visitors got a direct path to product selection; new visitors got a product-level map of the portfolio.

Why it worked

The grid reduced the cognitive cost of "which UHOne product do I need?" — a question the control forced users to answer implicitly.

What we learned

Even a traffic-hungry Home page benefits from more product-first signal, especially for audiences past initial consideration.

Trust today → conversions tomorrow

A – Control – No Module

Win

B – Added Module

HYPOTHESIS

Product pages attract high volumes of new visitors. Adding a module that differentiates UHOne from competitors on these pages will build enough trust on the first visit to bring users back — and return visits are where they convert.

RESULTS • 95% STAT SIG

+4.02%

Quote Start Rate

+6.4%

Quote Submit Rate

+26%

Return Visit Rate

The Quote Start Rate lift compounded because module-exposed visitors were much more likely to return — and return visits converted at higher rates.

Takeaway. Top-of-funnel trust content belongs on Product pages. It doesn't compete with intent capture — it reinforces it.

What the program proved — and what travels to the next one

01

Intent capture is the highest-leverage lever on UHOne

Capturing product type + ZIP at the top of the page drove the largest individual test win (\$5.95M) and underpinned the simplified variant (\$2.79M). The concept generalizes across placements.

02

Guardrails stayed green

Across every winning test, downstream Census completion and bounce held or improved. We moved the top of the funnel without breaking the bottom.

03

Design is iterable; the bet isn't

The simplified Sticky Nav retest showed the intent-capture bet survives design changes. Future work should treat placement, copy and density as variables around a fixed strategic thesis.

04

Upper-funnel trust compounds

The "Why United?" module created return visits, not just first-visit conversions. For new-visitor-heavy pages, trust content is a conversion asset — on a delay.

05

Audit-first beats idea-first

Every winner traced back to a specific finding in the initial audit (drop-off data, VoC, or prior tests). The pipeline's job was to translate evidence into tests, not to generate ideas from scratch.

06

Productionize fast, or lose the lift

Winning tests migrated from the testing platform to AEM quickly. Speed to production converted statistical wins into real annualized value.

Extending the thesis from capture to conversion

NOW • NEXT 30 DAYS

- Finalize AEM migration for Simplified Sticky Nav across all product verticals (dental, vision, short-term, HPG, STM, accident)
- Launch second-round Why-United module redesign for new-visitor-heavy product pages
- Stand up experiment-results automation so every shipped win gets an executive-ready summary within 24 hours

NEXT • 30–90 DAYS

- Use captured product-intent signal to personalize post-Census product display and hero creative
- Re-test Home Hero CTA + Product Grid against a layout optimized specifically for new visitors (second audience segment)
- Build a modular testing framework for Census-adjacent components (entry point, product intent, ZIP surfacing)

LATER • 90+ DAYS

- Extend intent-capture thesis into mobile-specific variants — Desktop was this program's focus; mobile is its own canvas
- Connect CRO tests to MarTech: sync captured product intent to email/paid retargeting to convert return visits faster
- Expand the pipeline from acquisition-funnel CRO into retention and cross-sell for existing UHOne members

T H A N K Y O U

Let's keep compounding the win.

The UHOne program produced \$16.77M in projected annualized value by betting that product intent, captured early, reshapes the entire funnel. The data confirms the bet — and the roadmap above turns a validated thesis into sustained growth.
